Northampton County, PA

RE: Surface Water Sampling

Dear LMBT Community Alliance:

Moonstone Environmental, LLC (Moonstone) recently completed surface water sampling activities in Lower Mount Bethel Township (LMBT) as part of an effort to assess potential impacts to surface water from agricultural runoff. Farmers in LMBT have began applying a new form of fertilizer that consists of biosolids derived from heat-treated sewage material. The purpose of the surface water sampling was to screen the runoff for contaminants that may be leaching from the biosolids. On June 18, 2019 Moonstone mobilized to the study area during a significant rainstorm and collected surface runoff samples from three locations. The study area and sampling locations are indicated on Figure 1 (attached).

Sampling Methods

Moonstone arrived at the first sampling location (Route 611) approximately one-half hour after the start of a heavy rainfall. Significant overland flow was observed from an agricultural field known to have applied biosolids fertilizer onto a roadway. Moonstone collected a surface water runoff sample in the PA Route 611 right-of-way. Moonstone then moved to the second sampling location (Little Martins Creek), which consists of an ephemeral stream located at the bottom of a steep gully that is adjacent to agricultural fields which have received biosolids. During rainfall events this stream becomes swollen with runoff from the adjacent fields. Moonstone observed significant stream flow at the time of sampling. Moonstone then moved to the third sampling location (Martins Creek-Belvidere Highway), which consists of a storm water culvert that passes below the roadway and discharges to a drainage swale. The storm water in this culvert receives flow from nearby agricultural fields that have applied biosolids.

At each sampling location, the water sample was collected by submerging an unpreserved plastic sampling jar into the runoff water, and then decanting the sample water from that container into the other sampling jars. Once all containers were filled, the sampling jars were placed in a cooler with ice and remanded to Eurofins TestAmerica in Edison, NJ under chain of custody procedures. The samples were submitted for analysis of nitrates/nitrites, dioxins, per- and poly-fluorinated alkyl substances (PFAS), and ten metals (arsenic, cadmium, chromium, copper, lead, mercury, molybdenum, nickel, selenium, zinc) that are regulated under 40 CFR part 503 (sewage sludge regulations).

Background on Water Regulations and Standards

Water in Pennsylvania is regulated by various agencies. Surface water standards are established in Pennsylvania under PA Code Chapter 93: Water Quality Standards. The samples collected for this investigation were surface water samples, so the Chapter 93 standards are the most appropriate standards for comparison. Unfortunately, Chapter 93 standards are only available for metals and nitrate/nitrite, not for dioxins or PFAS.

Groundwater standards in Pennsylvania are established under PA Code Chapter 250: Administration of Land Recycling Program. These standards include numeric limits for contaminants in groundwater. Because the samples collected by Moonstone are surface water samples, comparison to groundwater standards is not applicable, and again, the Chapter 250 standards are only available for metals and nitrate/nitrite, not dioxins or PFAS. The one exception is that a single dioxin, 2,3,7,8-tetrachloro-dibenzo-p-dioxin (TCDD), has a Chapter 250 standard of 30 ug/L in groundwater. This is the same numeric standard as the United States Environmental protection Agency's Maximum Contaminant Level, as discussed below. Chapter 250 standards are not included in this report because the results for metals and nitrate/nitrite are more accurately compared to the Chapter 93 standards for surface water, and the results for dioxins and PFAS have only one standard for comparison (TCDD), which is the same as the federal drinking water standard.

Drinking water standards in Pennsylvania are established under PA Code Chapter 109: Safe Drinking Water. Standards promulgated under Chapter 109 are primarily based on Maximum Contaminant Levels (MCLs) established at the federal level by the United State Environmental Protection Agency (EPA). MCLs are the maximum permissible level of a contaminant in water which is delivered to a user of a public water system. Because the samples collected by Moonstone are surface water samples, comparison to drinking water standards is not applicable. However,

Moonstone has included a discussion of EPA's limits for dioxins and PFAS in this report, if only to provide a frame of reference.

Dioxin Limits

Dioxins are a group of synthetic organic chemicals that contain several hundred structurally related individual chlorinated dibenzo-p-dioxins (CDDs), chlorinated dibenzofurans (CDFs), and certain polychlorinated biphenyls (PCBs) (collectively known as dioxin-like compounds). Rather than establish a drinking water standard for each dioxin-like compound, the EPA developed a standard for one of the most toxic compounds -- 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) -- and used TCDD as a reference standard to which other dioxin-like compounds could be compared. The EPA Maximum Contaminant Level (MCL) for TCDD is 30 picograms per liter (pg/L, or parts per quadrillion (ppq)).¹ As the reference compound, TCDD was assigned a Toxic Equivalency Factor (TEF) of 1.0. All other dioxin-like compounds are assigned a TEF lower than one to indicate their toxicity relative to TCDD. The TEFs that have been established through international agreements currently range from 1 to 0.0001.

The Toxic Equivalency (TEQ) of a compound is calculated by multiplying the concentration of the compound by its TEF (e.g., 20 grams X 0.1 TEF = 2 gram TEQ). The resulting TEQ provides a weighted value for toxicity so that the relative risk between dioxin-like substances can be compared. For mixtures of dioxin-like compounds, the TEQs of each individual dioxin-like compound may be added together to produce a cumulative TEQ for the mixture. The cumulative TEQs can then be compared to determine which mixture has a higher overall toxicity with respect to dioxin-like compounds.

For example, consider the following 60g mixture:

- 10g of compound A, with a TEF of 1 → $TEQ_A = 10g$
- 20g of compound B, with a TEF of 0.5 → $TEQ_B = 10g$
- 30g of compound C, with a TEF of 0.2. → $TEQ_C = 6 g$

The cumulative TEQ of this mixture would be:

$$(10g \times 1) + (20g \times 0.5) + (30g \times 0.2) = 26g \text{ cumulative TEQ}$$

In other words, this mixture of 60g of various compounds (A+B+C) would be as toxic as 26g of TCDD.

Moonstone has used this method to evaluate the dioxin results for surface water.

¹ This MCL of 30 pg/L has also been adopted by Pennsylvania as its groundwater standard for TCDD (0.00003 ug/L).

PFAS Limits

Perfluoroalkyl substances (PFASs) comprise a large group of fluorinated alkyl substances, including two that are the most commonly studied: perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS). EPA has established health advisories for PFOA and PFOS based on the agency's assessment of the latest peer-reviewed science. Health advisories provide information on contaminants that can cause human health effects and are known or anticipated to occur in drinking water. EPA's health advisories are non-enforceable and non-regulatory and provide technical information to state agencies and other public health officials on health effects, analytical methodologies, and treatment technologies associated with drinking water contamination. EPA has not established national primary drinking water regulations for PFOA and PFOS. EPA is currently evaluating PFOA and PFOS as drinking water contaminants in accordance with the process required by the Safe Drinking Water Act.

In January 2009, EPA developed a provisional health advisory (HA) for PFOA in drinking water of 0.4 micrograms per liter ($\mu\text{g/L}$ or ppb)² and a provisional HA for PFOS in drinking water of 0.2 $\mu\text{g/L}$ ³. The provisional HAs were developed to reflect an amount of PFOA or PFOS that could cause adverse health effects in the short term (weeks to months). The provisional HAs were intended as a guideline for public water suppliers while allowing time for EPA to develop a lifetime HA. The following tables from the May 2016 Health Advisories for PFOA and PFOS show the drinking water guideline values that were developed by several states.

State Guideline Values for PFOA		
State	Guideline ($\mu\text{g/L}$ or ppb)	Source
Delaware Dept. of Resources and Environmental Control	0.4	DNREC (2016)
Maine Department of Health and Human Services	0.1	Maine DHHS (2014)
Michigan Department of Environmental Quality	0.42	Michigan DEQ (2013)
Minnesota Department of Health	0.3	MDH (2009)
New Jersey Department of Environmental Protection	0.04	NJDEP (2014)
North Carolina Division of Water Quality	2	NCDEQ (2013)
Vermont Agency of Natural Resources	0.02	Vermont ANR (2016)

State Guideline Values for PFOS		
State	Guideline ($\mu\text{g/L}$ or ppb)	Source
Delaware Dept. of Resources and Environmental Control	0.2	DNREC (2016)
Michigan Department of Environmental Quality	0.011	Michigan DEQ (2013)
Minnesota Department of Health	0.3	MDH (2009)

² USEPA Drinking Water Health Advisory for Perfluorooctanoic Acid (PFOA) - May 2016

³ USEPA Drinking Water Health Advisory for Perfluorooctane Sulfonate (PFOS) – May 2016

EPA later replaced the provisional HAs from 2009 with new lifetime health advisories. To provide a margin of protection for a lifetime of exposure to PFOA and PFOS in drinking water, EPA established lifetime HA levels at 70 parts per trillion (ppt). EPA currently recommends that when both PFOA and PFOS are found in drinking water, the combined concentrations of PFOA and PFOS should be compared with the 70 ppt lifetime HA level.

Findings

The analytical results for surface water are summarized in Tables 1 through 3 (attached). The laboratory report is also attached.

- The findings indicate there are no exceedances of the Chapter 93 Surface water standards for the 10 metals analyzed and for nitrate/nitrite (Table 1).
- The results for dioxins (Table 2) indicate that the concentrations of TCDD were all non-detect, so there were no exceedances of the EPA MCL/ Pennsylvania groundwater standard (30 pg/L). The sample from Route 611 has the highest concentrations of dioxins, and the highest relative dioxin toxicity based on the cumulative TEQ. The TEQ for the Route 611 sample is 4.1, compared to TEQs less than 0.2 for the other two samples.
- The results for PFAS (Table 3) are largely without standards for comparison, but none of the surface water samples exceed the lifetime HA of 70 ppt for PFOA or PFOS, either individually or in combination (PFOA+PFOS). PFOA (highlighted in the table) shows a maximum detection of 48.7 parts per trillion (ppt) in the sample from Little Martin's Creek, which is below the EPA lifetime HA level of 70 ppt. The results for PFOS (highlighted in the table) show a maximum detection of 31.4 ppt in the sample from Route 611, which is also below the EPA lifetime HA of 70 ppt. The maximum combined concentration of PFOA+PFOS is 52.63 ppt in the sample from Little Martins Creek; again, this is below the EPA lifetime HA of 70 ppt.

Lower regulatory guidelines do exist in other states. The state guideline values cited in the EPA's May 2016 reports show values as low as 0.02 ppb (20 ppt) for PFOA (Vermont) and 0.011 ppb (11 ppt) for PFOS (Michigan). When compared to these lower state guideline values, the result for surface water from Little Martins Creek exceeds 20 ppt for PFOA, and the sample from Route 611 exceeds 11 ppt for PFOS.

Again, these comparisons may be misleading because the guidelines are for drinking water and the samples are surface water, but the numbers are provided to give some context as to the level of risk associated with PFOA and PFOS. In general, drinking water standards are more stringent than surface water standards, and there would be some degree of attenuation expected between the concentrations detected in stormwater runoff and concentrations detected in a potable well. To accurately assess the levels of PFAS in drinking water, samples would need to be collected from drinking water sources, such as potable wells. However, the relatively low concentrations of PFAS in stormwater runoff suggest that the impacts to groundwater and drinking water may be minimal.

Conclusions

The purpose of this investigation was to screen stormwater runoff for contaminants that may be leaching from fields where biosolids have been applied. The sample results confirm that metals, nitrates/nitrites, dioxins, and PFAS compounds are present in surface water. Metals and nitrates/nitrites do not exceed the standards for surface water, but the other compounds have no regulatory standard for surface water to which they may be compared, so their potential effect on human health cannot be evaluated at this time. In addition, the presence of these compounds has not been directly correlated to the presence of biosolids. To determine whether the compounds are specifically related to biosolids and not other sources, runoff samples would need to be collected from areas where biosolids have not been applied (i.e., background or control sample).

If you have any questions or need additional information, please do not hesitate to contact me.

Sincerely,

Bryan McAtee
Field Manager

Qualifiers

LCMS	
Qualifier	Qualifier Description
*	Isotope Dilution analyte is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
Dioxin	
Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.
U	Indicates the analyte was analyzed for but not detected.
Metals	
Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
General Chemistry	
Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Moonstone Environmental LLC

Project: LMBT Surface Water

Report Number: 460-184685-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 06/19/2019; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.2 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

LCMS

Method(s) 537 (modified): The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit for 13C2 PFTeDA: Martins Creek Belvidere Hwy (460-184685-3). The samples were re-analyzed with concurring results. Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample(s).

PERFLUORINATED HYDROCARBONS (PFC)

Samples Route 611 (460-184685-1), Little Martins Creek (460-184685-2) and Martins Creek Belvidere Hwy (460-184685-3) were analyzed for Perfluorinated Hydrocarbons (PFC) in accordance with PFC. The samples were prepared on 06/26/2019 and analyzed on 06/28/2019.

Perfluorohexanesulfonic acid (PFHxS) was detected in method blank MB 320-303775/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No other difficulties were encountered during the Perfluorinated Hydrocarbons (PFC) analysis.

All other quality control parameters were within the acceptance limits.

ORGANIC PREP

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-303775.

Case Narrative

Client: Moonstone Environmental LLC
Project/Site: LMBT Surface Water

Job ID: 460-184685-1

Job ID: 460-184685-1 (Continued)

Laboratory: Eurofins TestAmerica, Edison (Continued)

Elevated reporting limits are provided for the following samples due to insufficient sample provided for 8290_P_Sep preparation/analysis:
Samples were received in wide mouth amber glass bottles. Route 611 (460-184685-1) and Little Martins Creek (460-184685-2).

Elevated reporting limits are provided for the following samples due to insufficient sample provided for 8290_P_Sep preparation/analysis:
Martins Creek Belvidere Hwy (460-184685-3). Sample 320-50975-D-6 was received in a narrow mouth amber glass bottle. Sample
460-184685-F-3 was received in a wide mouth amber glass bottle.

The following samples were observed to be a light yellow color and contained sediment prior to extraction: Route 611 (460-184685-1),
Little Martins Creek (460-184685-2) and Martins Creek Belvidere Hwy (460-184685-3).

The following samples contain non-settleable particulate matter which plugged the solid-phase extraction column: preparation batch
320-303775.

The following samples were observed to be a light yellow color after extraction: Route 611 (460-184685-1), Little Martins Creek
(460-184685-2) and Martins Creek Belvidere Hwy (460-184685-3).

DIOXINS AND FURANS (HRGC/HRMS)

Samples Route 611 (460-184685-1), Little Martins Creek (460-184685-2) and Martins Creek Belvidere Hwy (460-184685-3) were analyzed
for Dioxins and Furans (HRGC/HRMS) in accordance with EPA SW-846 Method 8290A. The samples were prepared on 06/21/2019 and
06/24/2019 and analyzed on 06/27/2019.

Total TCDD was detected in method blank MB 320-302755/1-A at a level that was above the method detection limit but below the reporting
limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL
and/or RL, the result has been flagged. OCDD was detected in method blank MB 320-303266/1-A at a level exceeding the reporting limit.
If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No other difficulties were encountered during the dioxin/furans analysis.

All other quality control parameters were within the acceptance limits.

DISSOLVED METALS

Samples Route 611 (460-184685-1), Little Martins Creek (460-184685-2) and Martins Creek Belvidere Hwy (460-184685-3) were analyzed
for dissolved metals in accordance with 6010D. The samples were prepared and analyzed on 06/24/2019.

for the duplicate of sample 460-184891-1. Refer to the QC report for details.

No other difficulties were encountered during the dissolved metals analysis.

All other quality control parameters were within the acceptance limits.

DISSOLVED MERCURY

Samples Route 611 (460-184685-1), Little Martins Creek (460-184685-2) and Martins Creek Belvidere Hwy (460-184685-3) were analyzed
for dissolved mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 06/26/2019.

No difficulties were encountered during the dissolved Hg analysis.

All quality control parameters were within the acceptance limits.

NITRATE-NITRITE AS NITROGEN

Samples Route 611 (460-184685-1), Little Martins Creek (460-184685-2) and Martins Creek Belvidere Hwy (460-184685-3) were analyzed
for nitrate-nitrite as nitrogen in accordance with EPA Method 353.2. The samples were analyzed on 06/20/2019.

Nitrate Nitrite as N failed the recovery criteria high for the MS/MSD of sample 460-184672-5 in batch 460-619058.

Refer to the QC report for details.

Case Narrative

Client: Moonstone Environmental LLC
Project/Site: LMBT Surface Water

Job ID: 460-184685-1

Job ID: 460-184685-1 (Continued)

Laboratory: Eurofins TestAmerica, Edison (Continued)

Nitrate Nitrite as N failed the recovery criteria high for the MSD of sample 460-184672-5 in batch 460-619058.

Refer to the QC report for details.

Samples Route 611 (460-184685-1)[2X], Little Martins Creek (460-184685-2)[5X] and Martins Creek Belvidere Hwy (460-184685-3)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the nitrate-nitrite analysis.

All other quality control parameters were within the acceptance limits.

TestAmerica Edison
Receipt Temperature and pH Log

289

Job Number:

If pH adjustments are required record the information below:

Sample No(s). adjusted:

Dramatization Name/Comment

Inappropriate Project Manager and Department Manager should be notified about the samples which were pH adjusted.
Expiration Date: _____

samples for Metal analysis which are out of compliance must be acidified at least 24 hours prior to analysis.

Date: 6/19/19
Initials: JK

Environment Testing
TestAmerica

Sacramento
Sample Receiving Notes

460-184685 Field Sheet

Job: _____

Use this form to record Sample Custody Seal, Cooler Custody Seal, Temperature & corrected Temperature & other observations.
File in the job folder with the COC.

Notes: _____

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
